

SILMET

# ProLink

The universal dental adhesive produces exceptional bond strength with primer and sealer combined in a single bottle.

**P**roLink by Silmet is a 5th generation, single-step bonding agent that delivers excellent shear bonding values to dentin, enamel, and all popular light, dual, or auto-cure composites. In 2014, *Dental Product Shopper's* evaluation team put ProLink to the test. The universal dental adhesive scored high marks across a spectrum of criteria that included ease of use (application/placement), wettability, working time, reduced postoperative sensitivity, and overall satisfaction. These positive results earned ProLink a Best Product rating.

## ACHIEVING IDEAL RESULTS WITH PROLINK

"The selection of the volatile solvent in the bond system influences the moisture of dentin surface required for ideal results. Since alcohol is lighter than water, alcohol-based systems require an extremely dry surface. Acetone-based adhesives such as ProLink work best on a slightly moist surface because acetone is drawn into the tubules through a moist surface."

Dr. Lev Nudelman

How does ProLink work? On one hand, its advanced colloidal glass technology produces increased adhesion and durability that provides protection for dentin regeneration and pulp capping.

## 3 INDICATIONS

Use ProLink by Silmet for:

- 1 Direct composite or compomer restorations
- 2 Adhesive cementation
- 3 Composite repair

ProLink has low film thickness that allows for easy flow onto desired surfaces. The formula provides outstanding bond strength and also reduces postoperative sensitivity. While ease of use was a standout for the *DPS* evaluation team, ProLink's wettability also received a nearly perfect score. In fact, all of the dentist evaluators rated this feature as "excellent" or "very good." One dentist summed up her experience with ProLink with the comment "creates a very fine/thing coating, [provides] excellent wettability of the prep, and no post-op sensitivity."

Indicated for direct composite or compomer restorations, adhesive cementation, or composite repair, ProLink is available in 5-mL or 10-mL bottles.

## 1 BOTTLE, A MULTITUDE OF BENEFITS

- Combined primer & sealer
- Single application
- Minimal treatment time
- Excellent marginal integrity
- Reduced polymerization shrinkage
- Increased adhesion & durability
- Less sensitivity
- Ultimate protection for dentin regeneration or pulp-capping ability
