Digital Implant Workflow with VisionX and SICAT

VisionX and SICAT Implant 2.0.20 – for even easier and faster implant planning.

Thanks to the seamless cooperation with SICAT, Air Techniques remains true to its philosophy by teaming up with innovative partners to provide the most reliable, technologically advanced quality products that improve the end-user experience, workflows and enhance your return on investment. ProVecta 3D Prime users now have access to direct interfaces to well-known chairside CAD/CAM solutions and the workflow up to a chairside drilling template is available.

For more than a decade, SICAT has been providing innovative solutions for many different applications and speciality areas of digital dentistry. With SICAT Implant 2.0.20, you can now plan your implants even more easier and faster to perform. Order the SICAT drilling templates directly from the software and implement your planning in a targeted manner.

Please contact your local Air Techniques Representative to learn more.
