RC-Prep®

Root Canal Preparation Cream for
Chemo-Mechanical Preparation of Root Canals

#1
Selling

Root Canal Preparation
Cream in America!¹

Direct Application Into the Canal

RC-Prep's unique formulation of glycol, urea peroxide and EDTA in a special water-soluble base helps to remove calcifications and lubricates the canal to permit more efficient instrumentation. RC-Prep is also excellent for use with apex locators, as it permits consistently reliable readings.

RC-Prep Technique

RC-Prep is easily introduced into the canal directly via the MicroDose Pipette or a reamer, file or root canal filler. As RC-Prep cleans and lubricates, instruments cut freely without binding.

When RC-Prep reacts with sodium hypochlorite solution, pulp debris is actually lifted out of the canal. The pulp chamber is brightened, helping to locate additional canals.

With RC-Prep and proper instrumentation, the canal is thoroughly debrided. Dentin tubules and lateral canals are opened and cleaned, essential for successful treatment.
